CRAFT CANNABIS

THE RELIEF YOU DESERVE. THE CONSISTENCY YOU NEED.

When you're new to medicinal cannabis, finding the best product to treat your condition can be confusing. That's why we've taken a much simpler approach.

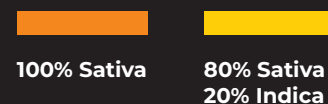

Every seven hills product has a color-coded label on the package to easily depict the strain category.

From a sunny bright orange (100% Sativa) to a deep midnight blue (100% Indica)—this unique color-coded system is your guide to finding a consistent and predictable outcome when using your medicine.

STRAIN TYPE

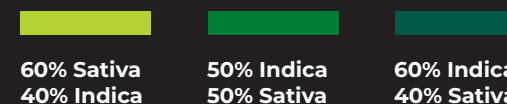

SATIVA

Sparking creativity and conversation, Sativas produce a more cerebral, energizing effect and tend to be stimulating for active daytime use.

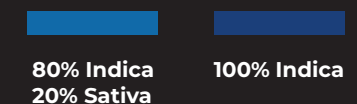

HYBRID

The best of both worlds, Hybrids possess traits and characteristics of both Sativas and Indicas. The prominent effect is determined by the genetic dominance of Sativa or Indica.

INDICA

Promoting physical sedation and full-body relaxation, Indicas produce a calming and tranquil effect that is often preferable for evening and bedtime use.

DELIVERY METHOD

INHALABLE

Inhalable medical marijuana allows the cannabinoids to enter the bloodstream via the lungs. Inhalation typically has the quickest onset of symptom relief.

- **Fast Acting: 1-5 minutes**
- **Short Duration: 30-90 minutes**
- **Potency: Med/High**

INGESTIBLE

Ingestible medical marijuana passes through the GI tract before entering the bloodstream. Ingesting marijuana has a slower onset with a longer overall duration.

- **Slow Acting: 15-30 minutes**
- **Long Duration: 4-6 hours**
- **Potency: High**

TOPICAL

Topical medical marijuana is applied to the skin and absorbed into the bloodstream. It is best utilized for localized discomfort without significant psychoactive effects.

- **Slow Acting: 30-60 minutes**
- **Long Duration: 2-8 hours**
- **Potency: Low**
